Setting up Google Scholar to get Results from Your Library

You can link your Google Account to your college or school library so that when you search Google Scholar articles from your library show up. Here are the steps:

1. Log into your college or school website
2. Switch to a different browser tab and log into your Google/Gmail Account
3. From the Google More Menu, open Google Scholar.
4. In the top menu click on “settings.”
5. A page will open that lets you set preferences. Make sure you see your Gmail account name in the upper right hand corner of the browser screen. In the left hand menu click on the link for “Library links.”
Type information to identify your library in the search box on the next screen. You can name up to 5 libraries. Here is an example:
Here are some sample results. You may or may not see the source named to the left of the results of the resulting list. If you associated your library correctly, you will be able to open up articles directly once you click on their titles. Here is an example of the kind of results I got.

Call me if this does not work for you, call me and I’ll walk you through it. Judy Stephenson.
